Build Your Own Branding (a.k.a Branding Sets) Release Notes
Version 1.4.0
Release Date: 2024-07-10

New Features

- **Corporate Branding Alignment**
  - **User Story:**
    As a **Salesforce Admin**, I want to apply our company's color scheme to Salesforce record pages so that I can maintain a cohesive brand image across all user interactions, including both standard and console app navigation.
  - **Description:**
    To maintain a cohesive brand identity, Salesforce Admins need a way to align Salesforce record pages with their company's color scheme. This feature allows admins to apply company-specific colors across all record pages, ensuring consistent branding and improving user experience.

- **Departmental Color Schemes**
  - **User Story:**
    As a **Service Agent**, I want different color schemes for each department's record pages so that I can quickly identify the context and prioritize my work accordingly, whether I'm in the standard app or console app.
  - **Description:**
    To improve work efficiency, service agents require a method to visually differentiate record pages by department. Implementing department-specific color schemes will help agents quickly identify the context and prioritize tasks.

- **Event-Specific Branding**
  - **User Story:**
    As a **Marketing Manager**, I want to temporarily change the colors of Salesforce record pages for special events so that I can promote awareness and engagement during campaigns, both in the standard app and console app.
  - **Description:**
    Marketing Managers need a way to temporarily adjust Salesforce record page colors to reflect ongoing campaigns and events, increasing user engagement and aligning with marketing strategies.

Known Issues

- **No Support for Older Browsers**
  - **Description:** Some older browser versions may not fully support all visual features.
  - **Workaround:** We recommend using the latest version of your preferred browser for the best experience.
- **Occasional Delays in Large Organizations**
  - **Description:** Users in large organizations may experience slight delays when applying new color schemes.
  - **Workaround:** We are actively working on optimizations for larger data volumes.
